

**What if...** there were one source for seamless, regional GIS data available when you needed it?

There is:

# RLIS Live

Regional Land Information System

## Data Resource Center

For more than 20 years, Metro's Data Resource Center has been a leader in the geographic information systems field through the development, use and distribution of data contributed by partners throughout the Portland metropolitan area.

Known regionally and nationally as the Regional Land Information System, RLIS provides data that are delivered in a common format that can be used to display spatial information. In this visual format, the data helps inform decision-making for local governments, private businesses and nonprofit organizations.

Through RLIS Live, the Data Resource Center provides easy access to current data that are agile enough to adapt to the evolving needs of its clients. An exclusively Metro service, RLIS Live is the definitive source for the region's land information.

### Whether you're:

- a planner using data to plan future land development
- an entrepreneur seeking the most advantageous location for a new business
- a nonprofit mapping a constituent base
- a web developer looking for current local data

RLIS Live is your one-stop source for the regional data you need to visualize and interpret the information that impacts your agency, business or community.

### Dependable

The same outstanding level of customer service that Metro's Data Resource Center is known for continues with a commitment to provide the latest technology for:

- seamless regional data maintained in a standardized data structure
- timely updates for accurate mapping
- easy to use web services.

A collaborative approach has enabled Metro to reduce barriers to quality regional land information, while supporting strategic decision-making.

Jack Dangermond, president, Esri

### Accessible

Datasets are available anywhere with Internet access. Work from home, office or remote location on your schedule.

### Scalable

From zoning classifications for regional planners, to tax lot specifics for local developers, RLIS Live offers hundreds of layers for the detail you need to tell your project story.

### Affordable

As a one-stop source, your savings are in the time and resources once spent on data sourcing, integration and updates.

The region's one-stop online data resource
