

Awareness...

Over 100 interactive maps and charts at portlandpulse.org serve as continually-updated "lab results" for the region's health checkup. They show where we are successful and where we are falling behind for important outcomes like unemployment, educational attainment, and access to nutritious food in underserved neighborhoods.

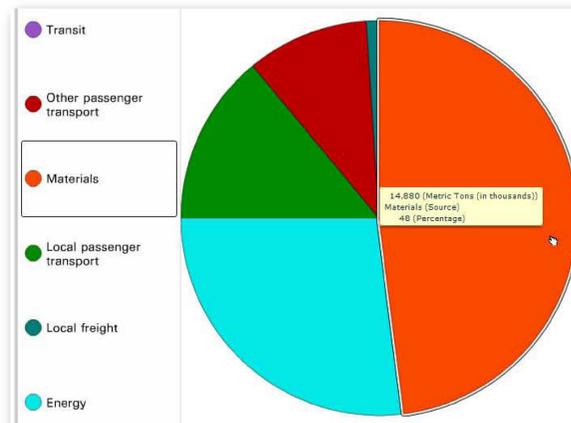

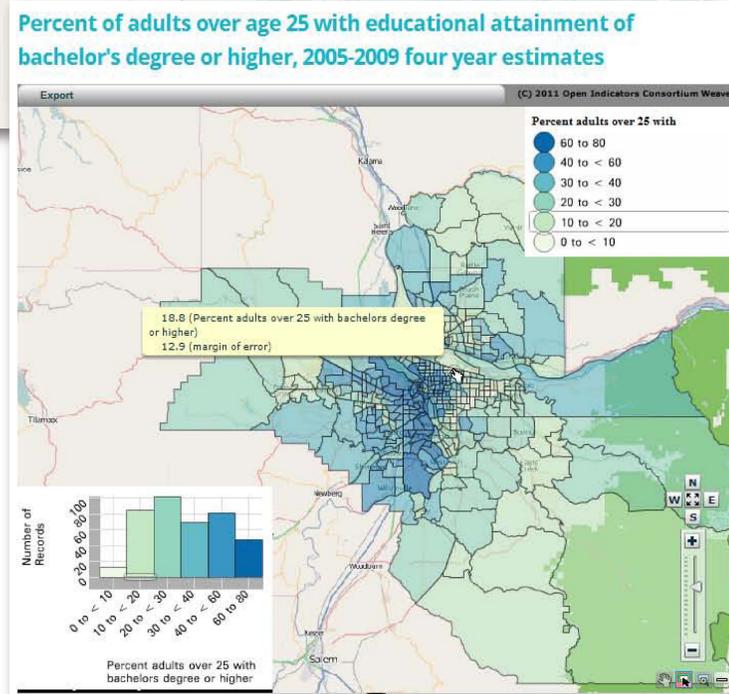

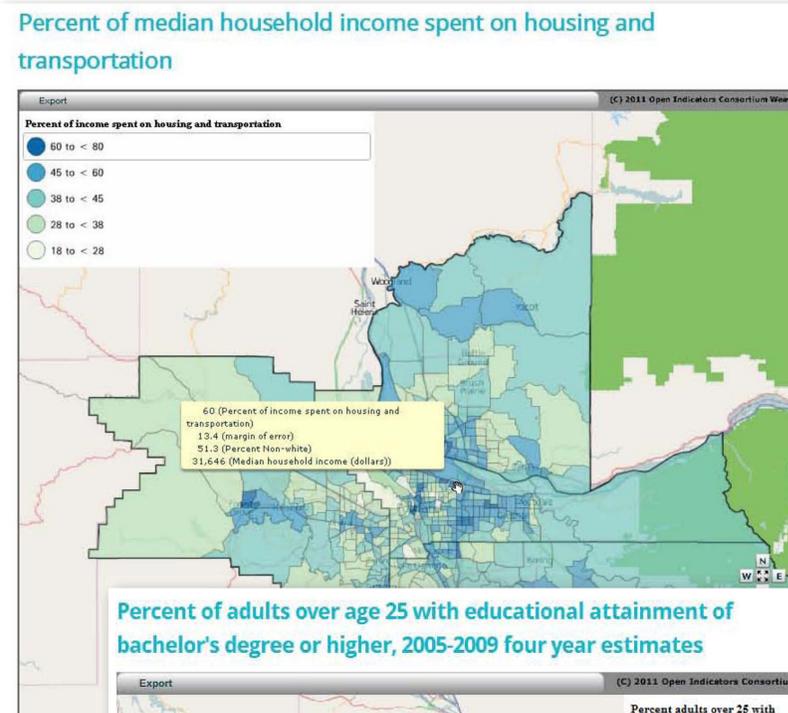

The first report, *The Path to Economic Prosperity: Equity and the Education Imperative* summarizes the state of the greater Portland Region and highlights human capital – people – as a critical success factor for improving results in all nine indicator areas.

The nine indicator topics

...Focus, Action

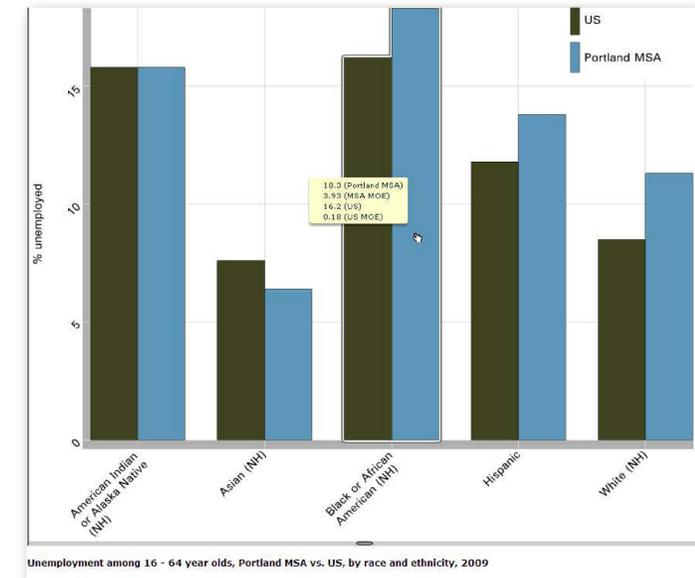

Greater Portland Pulse can make a difference in the way decisions are made in the region. It offers a "North Star" by which elected officials, business and community leaders, residents and stakeholders in the region can navigate, an opportunity to better focus their decisions and actions around shared, not disparate, regional goals for the greater good.

Measuring results

Greater Portland Pulse is designed to bring people together to choose, measure and use indicators in a way that will turbo-boost progress toward the results we want for all residents across the greater Portland region – outcomes like quality jobs, a better education and a clean and healthy natural environment.

Greater Portland Pulse is the first time an attempt has been made to co-create a better understanding of our results as a whole region - socially, environmentally and economically – and to apply that data to making life better. And it is the first time someone has tried to "connect the dots" across two states, four counties, over 40 municipalities with data on a comprehensive range of issues in nine inter-connected indicator topic areas.
